

Creating new element

- When creating new elements, try to use jQuery methods to manipulate the element instead of giving full HTML code.

// Don't

```
var $hidden = $( '<input class="form-control" type="hidden"
name="foo" value="bar" />' ).appendTo('#form');
```

// Do

```
var $hidden = $('<input/>')
  .addClass('form-control')
  .attr('type', 'hidden')
  .attr('name', 'foo')
  .val('bar')
  .appendTo('#form');
```

// Or

```
var $hidden =
$('<input/>', {
  class: 'form-control',
  type: 'hidden',
  name: 'foo',
  value: 'bar'
}).appendTo('#form');
```
