

Chain methods

- Chaining method is one of most powerful features of jQuery as it allows you to call multiple methods at the same time.
- *"Write less, do more", the jQuery's slogan, is perfectly right in this case*

```
// Don't
var $a = $('#about');
$a.hide();
$a.addClass();
$a.fadeIn();
$a.hide();
// Do
$('#about').hide().addClass().fadeIn().hide();
// Better - Add line-break and indent for readability
$('#about')
    .hide()
    .addClass()
    .fadeIn()
    .hide();
```
